Mohamed Mahmoud Hamed

Product Owner — Digital Products & Product Analytics | PSPO I

New Cairo, Egypt | +20 101 961 3401 | Mohamed7amed135@gmail.com | linkedin.com/in/mohamedhamed-po | mohamedhamed-po.github.io

PROFESSIONAL SUMMARY

Product Owner working at the intersection of business, data and technology since 2025, currently owning the vision, prioritisation and delivery of a four-product portfolio with combined budgets above 1,000,000 SAR. Owns end-to-end backlogs in Jira — ticket creation, prioritisation, dependency tracking and status updates — and translates business objectives into user stories with clear acceptance criteria. Defines the metrics each product is measured on, reads the data after release, and re-orders the backlog against it, applying Evidence-Based Management so that priority is decided on measured value rather than on who asks loudest. Released an MVP one month ahead of plan by ordering the backlog around the highest-value work. Professional Scrum Product Owner I (PSPO I), trained to PSPO II level in EBM, working across distributed product, engineering and design teams in Egypt, the UAE and Saudi Arabia, and translating technical progress into business-friendly updates for executives and investors.

CORE COMPETENCIES

Analytics & Measurement: Evidence-Based Management (EBM) · KPI and metric definition · activation, conversion, retention and NPS tracking · A/B testing · post-release data review driving backlog order · dashboard requirements and acceptance criteria · Power BI, Google Analytics, Mixpanel, Firebase

Product Ownership & Prioritisation: product vision and product goal · end-to-end backlog ownership · prioritisation by business value, effort and risk · balancing strategic initiatives against urgent business needs · translating business objectives into user stories with clear acceptance criteria · MVP definition · roadmapping · release planning

Agile Delivery & Execution: Scrum · Kanban · SAFe (PI planning, PI objectives) · Nexus (scaled, multi-team Scrum) · sprint planning, backlog refinement, sprint review and retrospective · Jira ticket creation, prioritisation, dependency tracking and status updates · monitoring delivery timelines and communicating risk early · Agile Product Operating Model

Stakeholder Engagement: executive, investor and client communication · discovery and requirement-gathering sessions · single point of contact for client product requests · managing conflicting requirements and expectations · regular status and progress reporting · translating technical progress into business-friendly updates · cross-functional collaboration across distributed teams

Quality & Enablement: definition of done · QA and user acceptance testing (UAT) before release · removing blockers and protecting team focus · usability testing and user research · continuous improvement of agile practice and documentation

Tools: Jira · Confluence · Power BI · Google Analytics · Mixpanel · Firebase · Figma · Adobe XD · Trello · Asana · Monday.com · MS Project

Technical Awareness: REST APIs · Git, CI/CD · ASP.NET Core · React/TypeScript · iOS and Android delivery — enough depth to challenge estimates and design trade-offs

Documentation: PRDs · BRDs · SOWs · technical specifications · user manuals

AI Product: AI product definition · generative-AI feature prioritisation (AI CV generation, AI skills-gap roadmapping) · AI adoption and retention measurement

PROFESSIONAL EXPERIENCE

Product Owner — Bonyad **Remote · teams in Egypt, UAE & KSA | Mar 2026 – Present**

Four-product portfolio · combined budgets above 1,000,000 SAR

- Own product vision, product goal and the end-to-end backlog across four products, prioritising initiatives and squad capacity against combined budgets above 1,000,000 SAR.
- Define the metrics each product is measured on — activation, conversion, retention and NPS — track them after release, and use them to argue the next investment: Evidence-Based Management applied to value realisation rather than opinion.
- Maintain one ordered backlog per product in Jira, kept transparent and visible so the team and stakeholders can see both priority and the reason for it.
- Translate business objectives into user stories with explicit acceptance criteria, breaking complex features into manageable slices so the team knows what “done” means before the sprint starts.
- Run sprint planning, backlog refinement, sprint reviews and stakeholder demos with distributed teams, monitoring delivery timelines and raising risks and trade-offs early rather than late.
- Act as the liaison between business stakeholders and the technical team: gather expectations, arbitrate conflicting requirements, and translate technical progress into business-friendly updates on status, progress and what is planned next.
- Partner with UX designers to validate concepts with real users before development commits a sprint, keeping evidence ahead of build.

PRODUCTS OWNED AT BONYAD

Mafeshsho8l — AI Job-Search Platform | live on iOS and Android | Egypt | 2026 – Present

- Established install, activation and retention as the product's value measures, read the data after launch, and re-ordered the backlog against it every sprint.
- Defined the AI capabilities worth building first — an AI CV builder and an AI-generated skills-gap roadmap — prioritised from researched job-seeker pain points rather than assumption.
- Took the product from an empty backlog to publication on both the App Store and Google Play.

Droob — AI-Enabled Premium Learning Platform | live on iOS | Saudi Arabia | 2026 – Present

- Released the MVP one month ahead of plan, in time for the start of the academic year, by ordering the backlog around the most valuable work and cutting the first release to the capability that mattered — matching students with verified tutors.
- Selected tutor sign-ups, booked sessions and student return rate as the measures of success, then used them to decide what to build next.
- Owned the product from first idea to launch: student and tutor discovery, competitive analysis, and a single product goal the whole team could repeat.

Quick-In — Chalet & Vacation Booking Platform | North Coast & El Gouna, Egypt | 2026 – Present

- Wrote the user stories and acceptance criteria behind host dashboards, guest booking and live availability, so developers could start without waiting for answers.
- Turned a broad "we want a booking website" request into a defined product goal and a backlog ordered by business value.
- Set the bar for "done" through QA and user acceptance testing before launch — the first real guests met a booking flow that worked.

Product Owner — Juleative **Remote · UAE & Egypt | 2025 – 2026**

Several client products owned simultaneously across the UAE and Egyptian markets

- Owned several client products at once, running Scrum in Jira with clear, visible priorities on every backlog.
- Ran discovery sessions with clients as the point of contact for incoming requests, and converted business needs into a backlog the team could start the same week.
- Authored the proposals, SOWs and product documentation that won client trust and kept expectations realistic against timeline and scope.
- Removed blockers early and protected the team's focus so releases stayed on schedule.
- Led feature prioritisation and UI/UX review sessions, balancing user need against delivery timeline.

PRODUCT OWNED AT JULEATIVE

Hub Drive — Car Rental Marketplace, Legacy Digital Transformation | UAE market | 2025 – 2026

- Sequenced the backlog around the cross-team dependency that unlocked supply — vendor onboarding — ahead of any polish work.
- Presented a three-phase release plan to executives that moved the product from legacy code to a launch-ready marketplace one valuable slice at a time, reducing the risk of a big-bang cutover.
- Held design, backend and frontend to one product goal through a complete rebuild (ASP.NET Core, React/TypeScript, admin panel, chauffeur app), published to the App Store.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Professional Scrum Product Owner I (PSPO I) — Scrum.org, June 2026 (certificate 1331062).
- PSPO II Training (Advanced Product Owner) — Scrum.org: Evidence-Based Management (EBM), product strategy and vision, advanced Product Backlog Management, stakeholder and customer collaboration, and the Agile Product Operating Model.

EDUCATION

Bachelor in Business Informatics — German University in Cairo (GUC), Cairo, Egypt **Graduated October 2024**

Overall grade: Very Good · Bachelor thesis graded A+ · Semester abroad at the German International University (GIU), Berlin.
